Presents

Brent Kerlin

Systems Engineer

Brent Kerlin started his career in IT as a computer technician for a retail PC chain, moving up the ranks to desktop publishing then WAN network administrator encompassing 13 stores in 3 states. During this period, Brent focused heavily on troubleshooting PC products and networking.

Brent furthered his career at a nationally known DVR manufacturer. During his 5 year tenure, he was promoted from build technician to ultimately act as manager of Research & Development, telecommunications, and technical support. He was instrumental in the development of a flagship DVR product which was regarded as an industry leader, at the time, of PC based DVRs.

In 2001, Brent switched his focus toward PC software development, working as a contractor developing custom software solutions. He also procured a long term installation contract of Dell Computer POS systems thru Mosaic Technology Group. During this time, Brent also began work on multiple R&D projects for Visual Management Systems.

Currently, Brent is developing several projects for VMS PDG. His expertise in PC based DVRs, extensive knowledge of software development and hardware configuration is the key to advancing the VMS product line. Recent projects include state-of-the-art software based POS integration, a solid state embedded operating system, and evaluation of new technologies that promise to expand and ensure the leadership of VMS products.
